

Dashboard Ideas

Since the User Guide mentions "**Food Canvas**," possibly this phrase could be used.
How could the tabs be set up?

Food Canvas

A dashboard or widget like the Application Board widget with columns like:

- Veg I like
- Veg to try
- Fruit I like
- Fruit to try

With the ability to move the food from one column to another like in Application Board.

How does the fruit / veg get onto the dashboard or widget? Manually but how could Panel suggestions be listed somewhere?

Shopping List

Something exportable.

It would be fun if foods could be moved around like in the widgets, or if a cut/paste could move foods into a shopping list. However, need the ability to add notes to items.

Goals

These will need to be "Goals" and not "Tasks."

Food isn't someone's job.

Completed "Goals" need to be marked as a "Success" and not crossed off.

Ideally no more than three goals at a time.

"Goals" somewhat fits into the "Insights" templates if it were modified as above.

Example Goals

I asked the Panel for goals but modified them.

- Add one vegetable each day for a week.
- Add one fruit each day for a week.
- Replace one junk food with a healthy snack.
- Replace one sugary snack with fruit.
- Buy a grab-and-go veggies item.
- Try one easy veg prep style: raw snack, steamed, sauteed, or roasted
- Make one whole-foods meal with protein, produce, and a whole-food starch.
- Buy a healthy eating book.

A cumulative list of successes by date. Maybe with a description of what was actually done.

Where would goals come from? Should be manual (user must choose their own goals) but it would be neat if something brought up in chat could be marked to transfer to goals.

Food Resources widget (Workspace) - I will supply some links.
